

Build Your Own Water Cycle

original art: Debra Mills

You will need:

1. Jar
2. Plant
3. Bottle cap or shell of water
4. Soil
5. Sand
6. Small rocks and pebbles

Fill the jar first with small rocks and pebbles, then sand, then soil. Then plant your small plant in the soil and place your bottle cap or shell of water in the jar.

Fill the jar as in the picture and put a lid on. Then, find a sunny place to put the jar and see how the water cycle works.
